

RoHS Compliance for Power-Sonic A-C Charger Series

The RoHS directive (Restriction of Hazardous Substances in Electrical Equipment) covers the same scope as the WEEE directive (Waste Electrical and Electronic Equipment). Batteries and accumulators do not fall into any of the ten categories listed by the WEEE directive (a good summary of these categories may be referenced on www.weeenetwork.com). However, battery chargers are within the scope of these directives. All Power-Sonic A-C battery chargers are in compliance with these directives and bare the RoHS mark on the labels.
